Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18 drawn to a valve system, classified in class 236, subclass 38.
- II. Claim 19, draw to a flow control valve, classified in class 251, subclass 304.

The inventions are distinct, each from the other because:

Inventions of Group I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the valve system as recited in claim 1 can use a valve such as a gate valve rather than the rotary valve of the subcombination. The subcombination as recited in claim 19 has separate utility such as in a system for controlling air flow into an incubator.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the search for each group is not required for the other groups restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed.
